## UAS RAVEN DRONE

The Raven Drone is specifically built for a variety of operational tasks. It can be fitted with both optical and thermal cameras, offering versatility in different environments. The drone can remain airborne for up to 75 minutes and cover a distance of up to 20 km. It is capable of conducting real-time monitoring, allowing for immediate data collection and analysis during flight.

## Basic Package

Ground Control Station

Battery Charging Equipment

Operating Console

Transportation Cases

Additional Batteries

3x Full HD Camera

## Applications

INTELLIGENCE

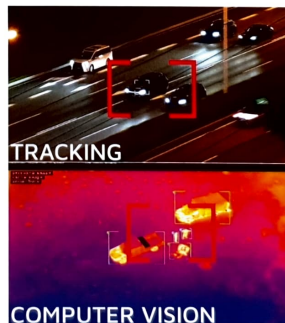

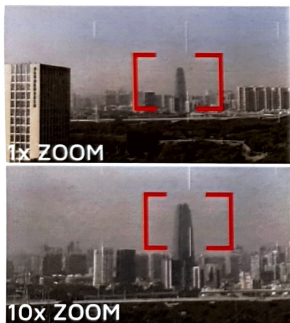

MONITORING

Flight time	Up to 75 min.
Maximum take-off weight, kg	4.5 kg
Flight ceiling, m	up to 2000 m
Flight speed, km/h	70/90 km/h
Operating temperature,	from -15 to +40 °C
Maximum flight range	20 KM
