

Classifier of UAVs of the AFU of Ukraine

*Prepared by the CTC Division to assist REBmans and other interested parties
especially for the Goodwill Revenge TG channel*

Annotation

The classifier is compiled to assist in solving the problem of indexing enemy UAVs operating in a particular direction, thereby accelerating the development of countermeasures methods. As well as for the identification of UAV remains. It was assumed that an ordinary soldier using the Classifier would be able to clearly explain which UAV he observed. It is recommended to pay attention to characteristic features, such as wing curves, tail and airframe design features, etc.

Table of Contents

Quadcopters	1
Multicopters	6
Wings	7
Airplane type propeller at the front	8
Airplane type propeller at the rear	13
Airplane type double tail beam A-tail beam	17
Airplane type double tail beam H-shaped tail	18
Airplane type double tail beam U-shaped tail	21
Airplane-type multi-engine	22
Barrage munitions	23
Out-of-classifications	24
